

# HOW IRS SECTION 174 THREATENS AMERICA'S MOST INNOVATIVE SMALL BUSINESS

Case Studies

Stories from small business across the United States  
devastated by the "Innovation Tax"

May 2024

Eva Garland Consulting

CELDARA MEDICAL

## Executive Summary

The following innovators took enormous personal and professional risk to bring their ideas to life. They followed the rules, they competed for government support for their high-impact, high-risk visions, and they won. Indeed, together they achieved >\$100M in grants and contracts through the Small Business Innovation Research (SBIR) and Small Business Technology Transfer (STTR) programs, from Federal agencies including the NIH, DOD, DOE, and NSF. They used every dime of this support to hire scientists and engineers to advance their products and services. But as much as they beat the odds in developing groundbreaking products, these companies could not have anticipated the tax burden that now threatens their existence.

As part of the Tax Cuts and Jobs Act (TCJA) of 2017, an “Innovation Tax” was introduced that forces startups to pay taxes before they even have a positive cash flow. Contrary to the “near certain advice” of their advisors, accountants, tax attorneys, and even elected representatives, the 2017 TCJA has not been fixed. And now, this “Innovation Tax” is hitting home – literally. For the 70 years before TCJA, research funding was expensable in the year it was received. This policy is mirrored in nearly every other country in the world. In China, their permanent innovation super-deduction even provides a 200% deduction for R&D expenses. But here at home in America – where we pride ourselves as belonging to the world’s most innovative country – the leaders and innovators who took the risk and stepped into our innovation economy are now burdened – often personally – with millions of dollars in tax liabilities.

**Over 1000 of our nation’s innovators from all 50 states have co-signed a letter to Congress, urging our leaders to fix the Innovation Tax.** A select set of stories from these co-signers are highlighted below. Some are already bankrupt. More will be soon if we can’t repeal this ill-conceived Innovation Tax. These are their stories...

## Case Studies

### Be Cool Pharmaceuticals LLC, *Fairbanks, AK*

**Kelly Drew, PhD**

CEO

Be Cool Pharmaceuticals LLC

Be Cool Pharmaceuticals is a small pharma, biotech company located in Fairbanks Alaska. The company develops technology to save lives and reduce disability caused by brain and spinal cord injury. The technology is inspired by the study of animals adapted to extreme environments found in Alaska and other Arctic regions. I am the founder and CEO of Be Cool.

**The innovation tax will put us out of business.** Please repeal this legislation.

*National Institutes of Health SBIR/STTR portfolio company.*

## OXbyEL Technologies, Inc., Mesa, AZ

### **Ed Ricci**

President, CEO, And Co-Founder  
OXbyEL Technologies, Inc.

OXbyEL Technologies is a water treatment company trying to commercialize the electrochemical technology to destroy the harmful chemicals PFAS in water. PFAS is in the water of over 100M Americans is linked to cancer, organ dysfunction, and immunity system disorders. There is no destructive commercial technology currently available, merely filtration.

The 5-year amortization of our 2022 research credits has resulted in a \$120,000 negative delta for OXbyEL. Rather than receiving the benefit of our research, we have to pay \$40K in taxes. Our cash flow runway remaining is 3-4 months, so our situation is precarious. And now the tax bill! We may not be around to see the benefits of the amortized tax in future years.

OXbyEL has been funded through the National Science Foundation and USAF grants. Still, these monies are not tax exempt and this grant money is taxed at the rate of normal revenue. We are looking to eliminate one position to lower monthly costs to survive. OXbyEL currently has 4 employees.

*National Institutes of Health SBIR/STTR, National Science Foundation, and US Air Force portfolio company.*

## Dynamoid LLC, Oakland, CA

### Laura Lynn Gonzales

CEO and Owner  
Dynamoid

I am the CEO and owner of a very small (i.e., 2 FT employees) science education software company based in Oakland, CA. For the last 4-5 years we have been building a platform for science communication using VR (think "Magic School Bus"). We have been bootstrapping development using profits from contract work, and in 2022, received an NIH SBIR/STTR grant for \$260,000, which took an enormous amount of effort in grant writing and administration. Our total revenue was somewhere north of \$400,000, and the majority of our expenses were software development and R&D-related activities.

**Unfortunately, with the changes to Section 174, because my company is an LLC taxed as an S-Corp, instead of a big tax refund due to a loss of \$30,000 on my Schedule K, I am now looking at a *personal tax bill of around \$100,000*.** To put things in perspective, I took a salary of ~\$100k in 2022 and have been surviving off of much less for the last few years (in the Bay Area, this is a lower-middle-class income level).

If these changes are not reversed, my only option is to negotiate a payment plan with the IRS where I would be paying well over \$1000/month for 5 years. I have an 18-month-old son, and this basically leaves us scrambling to figure out how to pay for childcare. And, what will we do in future years? I may have to just shut down the business, because even if we get to the magical 3-5 year mark where we break even, I will have a very difficult time growing the company beyond our current level of expenses.

*National Institutes of Health and National Science Foundation SBIR/STTR portfolio company.*

## iNFixion Bioscience, Inc., *San Diego, CA*

**Herb Sarnoff, MBA**

**CEO**

iNFixion Bioscience, Inc.

I am the CEO of a very small start-up company called Infixion Bioscience ([www.infixionbio.com](http://www.infixionbio.com)). We have a total of four people on staff (2 PhDs, a lab assistant and myself), all of whom are executing research to find a treatment for a rare disease called Neurofibromatosis (NF1) which impacts 1 in 3000 people in the U.S. (i.e., 120,000 Americans). All we do is R&D for this rare disease; nothing else. We have no products or services for sale, no customers, no customer income, etc. In 2022, our company was funded exclusively through the Federal NIH SBIR/STTR program, where we have received three Phase 1 SBIR/STTR grants from NINDS. We are doing solid research, have developed scientific tools to help other researchers, and are making solid progress toward understanding a new approach to developing a cure for NF1. In the case of my business, without the reversal of this Sec. 174 provision, Infixion likely will have to file for bankruptcy protection.

***...instead of paying zero tax on zero profit (per GAAP accounting principles), we will instead be liable for over \$84,000 in tax on the same zero profit. Unfortunately, Infixion does not have \$84,000 available to make this tax payment, leaving us little choice except to file bankruptcy at some point.***

In summary, the Tax Cut part of the TCJA will create \$84,630 in unexpected and unplanned tax liability, and the Jobs Act portion of the TCJA will (if this isn't fixed) likely result in job loss for the four people currently working to develop a treatment for this rare disease NF1. In addition, the almost \$2M that our company has received from the NIH and DoD to execute early-stage scientific work studying Neurofibromatosis, could easily become wasted if we have to stop our investigation abruptly and before completion (and documentation) of the key experiments. **Companies like Infixion are a key element of hope for this rare disease community in finding treatments, and Congress and the TCJA threatens to literally destroy our company with this change in tax code.**

*National Institutes of Health SBIR/STTR portfolio company.*

## Quantum Energy, Inc., *Santa Barbara, CA*

**Daniel Howard, PhD**

Founder and CEO

Quantum Energy, Inc.

As a startup that just made its first couple small sales, **we are relying on all our SBIR/STTR research funding to cover our most basic R&D expenses and will have zero dollars left over to pay taxes on R&D expenses.** This tax policy change will drastically stifle innovation and could be the nail in some startups' coffins.

*National Science Foundation SBIR/STTR portfolio company.*

## Malcova, Inc., Newark, CA

### **Peymon Ghazi, PhD**

Co-Founder and CEO

Malcova, Inc.

We are a late seed stage startup, based in Newark, CA. We are developing a new imaging modality for early detection of breast cancer. This solution can potentially change the practice of breast cancer radiology. Breast cancer is the most common type of aggressive cancer, and the early detection of it, especially in women with dense breast tissue, is an unsolved problem. It goes without saying that there are significant positive societal and economic impacts if we manage to bring this solution to market.

We have been working on this solution for 3 years. Thanks to SBIRs received from NIH and NSF, we have substantially de-risked the technology - but still have a long way to go. Our solution is a class III device - our regulatory path is PMA. So, naturally, we are quite dependent on the SBIR grants to get us to the clinical trial stage. As a matter of good practice, in designing our budget for SBIRs, we try to maximize the requested fee, to account for the unexpected expenses. As you know, in R&D, unexpected events are the norm. By not hedging against these risks, we potentially jeopardize our entire operation. In other words, these expenses always show up when we are most vulnerable - financially speaking. Slapping up with a tax like section 174 takes away all of the requested fees, and then some. This is the money that can be spent on hiring engineers and scientists, purchasing new equipment, establishing collaborations with the universities, etc.

**Bottom line, by imposing these taxes, the congress is stifling the very innovation it funded to begin with - the innovation that solves the issue of dense breast imaging. The only thing that this tax code does, as far as I'm concerned, is to delay a solution to this problem.**

*National Institutes of Health and National Science Foundation SBIR/STTR portfolio company.*

## Neurobehavioral Systems, Inc., *Berkeley, CA*

### **Peter Pebler**

Co-Founder

Neurobehavioral Systems, Inc.

Neurobehavioral Systems (NBS) is an SBIR success story, as we launched our flagship software through the support of an SBIR grant in the early 2000s. We have remained a profitable small business for over 20 years, continually supporting a small team through software sales.

In the last 5 years, we have been developing a new product aimed at earlier and more precise diagnosis of cognitive decline (e.g., mild cognitive impairment, Alzheimer's disease). With an earlier diagnosis, they can begin receiving appropriate care that can help delay the effects of dementia. Research and development of this product has been funded by multiple SBIR grants. SBIR grant funding supports salaries for NBS staff, which has more than doubled as we work to bring this product to market. In addition, grant funding has allowed us to include hundreds of aging Americans from a variety of sociocultural backgrounds in our testing, broadening the scope of our diagnostic tool. This outreach means that typically underserved populations in the US are more likely to benefit from our testing in the future.

**Without these grants, there is little doubt we would be unable to afford to bring our innovative and important product from the data gathering phase through to FDA approval and to market.** At the same time, new tax code changes have made it very difficult to build the full team we need to continue. We are asking Congress to end the Innovation tax and enact House Bill H.R. 2673 and Senate Bill S.866.

**The SBIR program was intended to help companies like ours bring scientific innovations to market, but with this Innovation Tax, it has become nearly impossible to do so.**

*National Institutes of Health and National Science Foundation SBIR/STTR portfolio company.*

## Siege Pharmaceuticals, Inc., *Irvine, CA*

### **Alison McCracken, PhD**

CEO and Principal Scientist  
Siege Pharmaceuticals, Inc.

I am writing to share Siege Pharmaceuticals' experience following the implementation of the Tax Cuts and Jobs Act. At this stage, Siege is fully funded by NIH grants, including 5R44CA257568-02 from NCI, which was active in 2022. The significant changes to the Internal Revenue Code Section 174 mean that Siege's federal tax bill increased from \$0 in 2019-2021 to nearly \$15,000 in 2022 and 2023. The size of these bills means that, if we are truly liable for these taxes, the company will likely be forced into bankruptcy. It is especially frustrating that our only income is from the NIH, yet we cannot pay income tax using these funds.

After talking to many advisors, it has become clear that there is a great deal of confusion about how to apply this law and whether/when it might be revised by Congress. It would be extremely helpful to receive written guidance from the NIH and/or IRS on this matter as soon as possible.

Having written guidance to share with our accountants and tax preparers would go a long way towards resolving this confusion.

Thank you for your help with this issue. It is of great importance to me as it has placed the survival of this small business in jeopardy due to what is likely an unintended consequence of how this legislation was written.

*National Institutes of Health SBIR/STTR portfolio company.*

## LumenAstra, *Boulder, CO*

### **Jim Pollock**

Co-Founder and CEO  
LumenAstra

Our company worked closely with Eva Garland Consultant Brian Waters in our efforts that have resulted in an NSF Phase I and Phase II award along with a US ARMY Research SBIR/STTR Phase I and a grant from the State of Colorado.

This grant funding has allowed us to postpone raising outside capital while the terms are so egregious this past year.

However, that means **ALL of our funding is currently grants that have restrictions against being used for payment of income tax.** In our case, we will have \$500K of grant income this year that in any other year would be countered by \$500K of expenses for no profit and no tax liability. HOWEVER, if we have \$400K of engineering wages and \$100K of other expenses, we would only be able to deduct 20% of the \$400K of wages leaving us with \$320K of taxable “profit”. **We would need to pay about \$80K of taxes to Section 174. And we have NO funds that can be used to pay taxes.**

I know many companies similar to us that spun out of the Univ of Colorado with strong grant support that are next to us in a porous boat.

*National Science Foundation and Department of Defense SBIR/STTR portfolio company.*

## Hawaii Fish Company, Inc., *Waialua, HI*

### **Ron and Estralita Weidenbach**

Co-Founders and Directors

Hawaii Fish Company, Inc.

Hawaii Fish Company, Inc. is a small family-owned aquaculture farm on the North Shore of Oahu, established in 1978. We received our first SBIR award in 1993 from the USDA/NIFA to develop captive spawning and culture technologies for targeted local, domestic, and export seafood markets. We have found our federally funded research grants to be pivotal to our company's commercialization success. After two successful SBIR Phase II aquaculture awards, we received the SBA Tibbitts Award in 2000 and a place in the SBIR Hall of Fame.

We currently have two Phase II awards from the DOE/SETO and USDA/NIFA to support our diversification into manufacturing totaling \$1.8 million in funds, which was a major achievement for our small business. **However, with the elimination of R&D expensing under Section 174, this achievement will likely force us to end our long-term SBIR involvement and require us to pay taxes that are not proportional to our small farm's current income.**

**This provision must be rescinded and the deduction of R&E expenditures under prior law retroactively reinstated.** After 45 years in business, we do not want the unjustified consequences of the Section 174 Innovation Tax to force our family farm into financial straits and potential closure.

*National Institutes of Health SBIR/STTR program portfolio company.*

## Acoustic Range Estimates LLC, *Chicago, IL*

### **Sarah Patch, PhD**

Founder

Acoustic Range Estimates LLC

Amendments to Section 174 passed by Congress in 2017 may have unintended consequences.

My understanding of IRS Notice 2023-63 is that many SRE expenses must now be amortized over a 5-year period, rather than deducted as expenses are incurred. Businesses that are forced to amortize SRE expenses will take a short-term hit; small enterprises may be forced out of business.

At the very least, please provide a safe harbor for SRE activities performed within a fixed timeframe, such as for a research contract or grant. The taxpayer should be allowed to fully deduct within the contract timeframe. Otherwise, small businesses will be unable to accept research grants or contracts.

As I read Notice 2023-63 even large companies may be reticent to accept large SRE contracts. That could impact efforts like emergency vaccine development, as well as ongoing projects within the Department of Defense, particularly DARPA. Were all SRE expenses incurred to fight Covid 19 amortized over 5 (or more) years?

My (very) little spin-off is a LLC, and I may be forced to dip into my retirement account to cover a 6-figure tax bill for 2022. Thank goodness we are moving out of the research stage for our first product. If guidance 2023-63 holds, it will also be our last product.

**Please work to stimulate research and development, rather than stifle it. A good first step will be revoking or amending the 2017 amendments to Section 174.**

*National Institutes of Health SBIR/STTR program portfolio company.*

## Prapela, *Portland, ME*

**John Konsin, MBA**

CEO

Prapela

My company, Prapela, is the most awarded pediatric medical device startup in the United States. Our technology has been twice awarded Breakthrough Device Designation from the FDA. We are a 3X winner of the FDA Pediatric Device Consortium Award. We have been selected in the MassChallenge, Johnson & Johnson (JLabs), and MedTech Innovator accelerator programs. We have received over \$8M in non-dilutive awards from the NIH, the States of Ohio, Massachusetts, Maine, and Johnson & Johnson. Our breakthrough technology is the world's first mattress that helps newborns breathe. For the past two years, we have been entirely funded with Small Business Innovation Research (SBIR) awards from the National Institutes of Health (NIH). We are working to file for FDA clearance by the end of this year. We need FDA clearance to sell and create revenue for our business. The 2017 Tax Cut and Jobs Act threatens over twenty years of development and support from numerous clinical studies, neonatologists, and parents across the United States.

**As a result of being unable to expense research spending immediately, we now owe both State and Federal income taxes. Since NIH funds cannot be used to pay taxes, we are now at risk of securing FDA clearance and continuing our work to improve the medical treatment of opioid-exposed and preterm newborns.**

I have reached out to Senators King and Collins and Congresswoman Pingree. Senator King is a cosponsor on S.866. I've asked Senator Collins to join him and 38 other Senators as a cosponsor. I've also asked Congresswoman Pingree to cosponsor H.R. 2673.

Please let me know if you would like to learn more details on the impact of 174 on Prapela or help me take this story to the Hill.

*National Institutes of Health SBIR/STTR portfolio company.*

## Avoneaux Medical Institute, *Easton, MD*

### **Michael R. Emmert-Buck, MD, PhD**

Director

Avoneaux Medical Institute

As an experienced physician-scientist and entrepreneur I am not usually given to hyperbole, but can state without equivocation **the current Section 174 rules will essentially end the startup world as we know it.** My latest biotechnology company is being badly hurt by Section 174, but I am in a financial position to weather the storm, although I am laying off personnel and cancelling student internships for tax reasons. My main concern is with the startup ecosystem and the thousands of young entrepreneurs who will not survive.

Consider the scenario of most new tech startups. A few young scientists or physicians invent a new technology and form an LLC to commercialize the method, with an expectation they will spend the first 2-3 years doing mostly R&D. They are typically in their early thirties, working a regular full-time job, married with one or two small children, living in an apartment, paying their bills month-to-month, with little or no savings, and working extra hours on the new startup during nights and weekends. Moreover, they are aware that creating and commercializing a new technology is incredibly risky. But they are entrepreneurs so they do it anyway.

If they are fortunate, they will receive an SBIR grant or angel/VC investment to support R&D. Under the old 174 rules this would not create a tax burden for the new LLC as the R&D expenses would be deductible. But under the new rules they face an immediate tax liability in the hundreds of thousands of dollars that they are personally responsible for.

How do they pay this tax? Where will the money come from? Who will form a new tech startup under these conditions? The answers are the young inventors have no money to pay the tax, and nobody will form a new tech startup under these conditions. Moreover, the next generation of tech entrepreneurs, many who are working as students or interns at startups now, have a front row seat to this debacle and are aghast the US government is crushing the small companies their bosses worked so hard to create. As their mentors we have no answers for them. It's inexplicable.

Thus, I urge Senators Crapo and Wyden to reach a compromise to repeal Section 174 as soon as possible. **The damage since late 2022 is tremendous and getting worse with each tax cycle.**

*National Institutes of Health SBIR/STTR portfolio company.*

## Cherry Bekaert Advisory LLC, *Rockville, MD*

**John Ure, JD**

Partner

Cherry Bekaert Advisory LLC

I have many clients affected by 174, many of which are still in the SBA 8a program and incurred several million dollars in additional taxes in 2022. Now we're planning for the impact for 2023. As you know, 174 and its corresponding tax increase have stifled the growth of these companies, and several told me they were planning to hire more personnel for new contracts and deliberately planned growth, but now they aren't able to because of the additional tax burden. Virtually all of my tech companies are severely hit by this, while many of my clients in other industries experience little or no effect. It has actually been very heartbreaking to work with my clients this past year, to see their disbelief and watch them scrap plans they've worked so hard to achieve. **I think it is one of the most ill-advised tax policies I've ever encountered.**

## inLUCEO Biosciences, Inc., Severna Park, MD

### **Michael Tangrea, PhD**

CEO & Co-Founder  
inLUCEO Biosciences, Inc.

Our company, inLUCEO Biosciences, Inc. is developing a novel upfront technology that can greatly impact molecular diagnostics and precision medicine for patients. To date, we have relied solely on government grants and contracts to accomplish the R&D necessary to advance the technology. However, Section 174, as it stands now, will negatively impact our ability to continue as a business. With such a dramatic tax burden for seed companies that are trying to survive and make a positive impact in the world, Section 174 makes running a company untenable. Saddling innovation with such a heavy cost will deter the next generation of startups from pursuing their dreams.

Please repeal Section 174 retroactively to support the growth of innovation in the United States.

*National Institutes of Health SBIR/STTR program portfolio company.*

## Rise Therapeutics LLC, *Rockville, MD*

**Gary Fanger, PhD**

CEO

Rise Therapeutics

I am reaching out to address a critical issue that holds significant implications for the dynamism of our nation's innovation landscape. The interpretation and application of Section 174 within our current tax framework has reached a critical juncture, one that could potentially undermine the bedrock of our domestic R&D enterprises if not promptly and properly addressed.

Should we allow this to persist unrectified, we face not only the dissolution of these companies but also the forfeiture of our competitive stance in the global R&D arena. With competitors like China escalating their R&D investments, the United States simply cannot afford to handicap its innovation engines in such a manner.

The ambiguity surrounding the tax code, particularly post-TCJA, has become a substantial hindrance to the operation of businesses that are central to our nation's progress. The current state of affairs, despite extensive input from top-tier accounting expertise, still lacks a definitive path forward. This uncertainty is far from a mere inconvenience—it translates into tangible fiscal strain, as evidenced by the costly diversion of both human and financial capital into deciphering these tax complexities rather than fueling innovation.

Our organization, with multiple products in clinical testing and now contributing significantly to technological and biomedical advancements, is not immune to these pressures. The implications are profound, extending beyond our reserve margins and endangering the livelihoods of our dedicated employees. **Moreover, our role as a catalyst in nurturing start-up ecosystems is in jeopardy; these seed-stage ventures represent the next wave of our nation's innovation prowess, yet without intervention, we are forecasting a grim future for them under the current tax landscape.**

*National Institutes of Health SBIR/STTR portfolio company.*

## FTL Labs Corporation, Amherst, MA

### **Kristie Stauch-White**

Founder and CEO

FTL Labs Corporation

I am the CEO of FTL Labs Corporation, a small research and development company in Amherst, Massachusetts. **I wanted to let you know that the recent changes to R&D tax law are a real threat to my company.**

In order to stay in business during 2023, we used all of the money the company had saved over the previous ten years of excellent and consistent R&D service work to pay our tax bill, which unexpectedly grew to over 6 times what it had been in the past. We are just holding on because our tax accountants assure us that the law will be changed. We are unable to operate, much less grow with the new rules.

We understand that there are some tax accountants that are just ignoring them, claiming that the IRS directions on them are self-contradictory, but our long-time tax accountants say that is not so, and we are reluctant to go from bankrupt to tax fraud to stay in business. To be clear, I believe the recent changes make all but the largest R&D services business models impossible.

**I strongly urge Congress to defer Section 174's amortization requirement for R&E expenses.** To stay in business, we would need to see several things rolled back to the status quo of five years ago. These include: Allow the deduction of non-IR&D expenses under section 162, and not subject to section 174. Reword the law to allow for businesses performing research for profit to deduct expenses as allowed as ordinary and necessary. Revise the recent requirement of conformity between Section 174 and Section 41 that disadvantages R&D services companies like mine. I believe this would meet the intent of the changes and still allow businesses like mine to survive. Thank you for your attention to this matter.

*National Institutes of Health SBIR/STTR portfolio company.*

## Venova Technologies, Inc., *Cambridge, MA*

### **Liz Earley**

Co-Founder and CBO  
Venova Technologies, Inc.

I am writing to express my concern about the proposed changes to Section 174 which will require amortization of R&E expenses. My co-founder and I are recipients of NIH grant funding which is being used to develop a novel medical device. Our start-up is female-founded, pre-revenue, and relies on grants to support product development.

**The change in the tax code will have a devastating impact on our company and may force us into bankruptcy.** The NIH does not allow funding received from grants to be used to pay taxes. We applied for our first NIH grant when the tax code allowed us to deduct 100% of our R&E expenses in the year they were recorded. We are currently waiting on the review of an additional NIH grant, and we were planning to submit future proposals for funding. If the tax law change is not repealed, we will be subject to a significant tax liability.

As a pre-clinical stage company, it is very difficult to raise funding other than grants. **We are not personally able to cover this financial burden. We hope the IRS will consider the impact this tax law change will have on the medical device and biotech start-up community.**

*National Institutes of Health SBIR/STTR portfolio company.*

## 2innovate, *Detroit, MI*

### **Brad Burke**

Founder and CEO

2innovate

Thank you for the opportunity to share how this tax code change in Section 174 has adversely impacted our company.

Currently, our start-up LLC has no other revenue. We are trying to get by until January 2024, using personal (household) funds for R&D expenses instead of using the NSF Phase I award to save tens of thousands of dollars of additional taxes in 2023.

(We were recently turned down for an unsecured bank loan, even though we had proof of the NSF award.)

We estimate that on our \$275,000 NSF Phase 1 grant, we will owe more than \$55,000 in company taxes, mostly taken from our personal funds. I have no idea how we will afford a larger Phase 2 award if the tax code is not changed.

**Companies like ours should not have to apply for bank loans to accept Federal and State grants.** We need a change in the tax code so that our company, 2innovate LLC, can provide innovative and life-saving products to U.S. consumers without going bankrupt.

Thank you for any assistance you can provide in advocating for a change in the tax code on our behalf.

*National Science Foundation SBIR/STTR portfolio company.*

## ATech Designs, Inc., Dover, NH

### Karl Leinsing, MSME, PE

President

ATech Designs, Inc.

The changes to Section 174 Innovation Tax has had a big impact on my company. We had to pay \$117,170 (pulled from my personal savings and retirement funds) in taxes yesterday because of a large “add-back” that was subtracted from our qualified expenses.

This was not expected and prevented us from hiring engineering interns for this summer to help us with two development projects. R&D companies need the capital and assistance today when there is no income into the business or dedicated to new projects. These projects don’t develop income or new jobs until they are manufactured and sold. The biggest hit for R&D companies is when you get a grant to help with R&D, but then have to pay tax on 80% of the grant on the first year. If the company is successful, then you get it back over five years but this is not when the money is needed.

The current changes will delay the innovation and if the product is cancelled (likely as a result of no monies from paying taxes on a grant), sold, or a company sale or closure, then there is no ability to recoup the deduction in future. **This is all EXTREMELY crippling to a company that spent the entire grant on R&D and was NOT planning to pay a big last minute tax bill because of the change.** Please put things back the way they were with 100% income and expenses considered and deducted in same year.

*National Institutes of Health SBIR/STTR portfolio company.*

## CairnSurgical, Lebanon, NH

**David Danielson**

CEO

CairnSurgical

**Section 174 rules increased our taxable earnings during Phase II SBIR/STTR grant that was awarded to support completion of a pivotal clinical study, and thus curtailed ability to complete the study as planned** with respect to per patient costs and site initiation costs that were planned to be fully covered by the grant. We reverted to using private investment funds that would have otherwise been used to expand operations.

Section 174 rules also inhibited and delayed our plans to add an additional R+D software engineer based on expensing timeline, which delayed our ability to develop essential workflow software meant to track product orders and production and deliveries. We had to rely on manual workflows that added even more costs.

*National Institutes of Health SBIR/STTR portfolio company.*

## Celdara Medical, Lebanon, NH

### Jake Reder, PhD

Co-founder and CEO  
Celdara Medical

Same-year R&D expensing is a wonky and confusing issue. The world's largest accounting and tax firms have resisted providing guidance. Why? ***Because nobody believed Congress would let these changes stand.*** Even IRS only put out guidance a few weeks ago. Like many other entrepreneurs, for the last 5 years I was regularly assured by tax professionals and our elected representatives that we could ignore the TCJA's innovation tax; a fix would come. Entrepreneurs trusted in the experts and went back to running their businesses. Nobody thought it would come to this because the damage is going to be so extensive.

My own company will lose millions. We must now consider new lines of business and business models, we cannot invest in R&D at nearly the same level, we will not expand nor hire as aggressively, and our impact on the world will be measurably lessened.

Our research indicates that this policy could push >5,000 of the most promising NIH and DOD-backed companies into bankruptcy. Many are not speaking up for fear of demoralizing or losing their teams. Many simply can't believe this could happen in America. And pass-through taxation will bankrupt many of these founders personally.

**Our Nation's innovation culture is at risk** – innovators will be bankrupted, the best and brightest entering the workforce will not choose an entrepreneurial path, our mid-career experts will not take on the risk of doing something revolutionary, and new company starts across our innovation economy will plummet. America, once a beacon of innovation, now risks fading.

*National Institutes of Health SBIR/STTR portfolio company.*

## Cell Podium, Newark, NJ

### Cesar Bandera, PhD

Founder, Cell Podium

Leir Chair of Entrepreneurship, New Jersey Institute of Technology

The New Jersey Institute of Technology (NJIT), a public R1 university with a research budget of >\$150M/year, spins off on average five startups per year based on technological innovation. Under programs including the NSF I-Corps, NJIT provides training, seed funding, and an ecosystem for these ventures, which represent the next generation of healthcare diagnostics and interventions, telecommunications, transportation, and energy. In all cases, the SBIR program is a critical step in the maturation of these ventures, and for three years on average is the ventures' only source of funding. These ventures are at their most vulnerable R&D-intensive financial stage, and none have the resources to pay on average an additional \$250K in taxes under the Innovation Tax (Section 174).

State and Federal governments rightly prioritize the translation of research from academic labs into the market. **It is thus counter-productive for the government to kill the precious few innovations that survived the challenges of basic research, intellectual property protection and licensing, business formation and staffing, and SBIR funding, all in a misguided attempt at collecting a few hundred thousand dollars per venture.**

## Simphotek, Inc., *Newark, NJ*

**Mary Potasek**

CSO

Simphotek, Inc.

The change in the tax code would put us out-of-business. We are working on internal cancers, including breast cancer. We have done a Phase I and are now on our Phase IIa. We are also working on several other internal cancers and applied for clinical trials from NCI SBIRs. As you know, without clinical trials these studies cannot be funded by outsiders so the cancer studies would come to an end. As a result, these critical studies would not benefit anyone.

*National Institutes of Health SBIR/STTR portfolio company.*

## PHYTOSTONE, Inc., *Buffalo, NY*

### Emily Majewski

Founder  
Phytostone, Inc.

PHYTOSTONE is a 100% woman-owned hard tech studio which develops advanced natural building materials. In early 2023, I was notified that my firm had won SBIR and NYSERDA grants. Our R&D money for this year skyrocketed from a very limited self-funded effort to \$514,000, with over a million dollars additionally set aside for Phase 2 development through NYSERDA. As my firm committed to our award research programs, I became aware of the devastating impacts changes to Sec 174 were going to have.

**PRE-REVENUE:** PHYTOSTONE is pre-revenue and is now being funded 100% through the above-described grants. As founders, our only “profits” from these grants are the wages we are earning from working full time (wages that are already subject to W2 and self employment taxes). Otherwise, 100% of the research money we have won has been allocated to **direct research expenses with budgets that are to be spent down to zero. There is no revenue.** Not only is there no revenue to pay these new taxes with, even if we had a reserve, it would be illegal to do so: in the case of the SBIR grant, we are prohibited by law from using Federal grant funds to pay Federal taxes. Talk about the proverbial rock and hard place.

**IMPACTS OF AMORTIZATION:** For us and thousands of other pre-revenue startups and university spin-offs, TCJA changes to Sec 174 are apocalyptic. We are an LLC, and as I manage the State and Federal research which we are now contractually obligated to perform, for every dollar I spend it feels like I am digging a grave of personal tax liability 1 dollar deeper. I simply don’t know where the funds to pay for next year’s taxes on these amortized research costs are supposed to come from when my company is not currently selling goods nor services. The American Dream is truly broken when every day an innovator invests in developing a future product brings them one day closer to bankruptcy.

**IN CONCLUSION:** For the US to enjoy continued economic prosperity into the 21st Century it needs a thriving ecosystem of innovators building tomorrow’s businesses and taxbase. I implore you to re-examine the latest interpretation of Sec 174 immediately. Please consider the perspective that both self-funded and government-funded research costs should not be considered taxable revenue. **Research is not revenue nor does it ever guarantee revenue.** It’s an investment in the future that deserves stimulus and protection as acknowledged by 191 out of 193 countries’ tax departments around the world.

*National Science Foundation and NYSERDA portfolio company.*

## 3C Institute and 3C Family Services, *Durham, NC*

### **Melissa DeRosier, PhD**

Founder and CEO, 3C Institute and 3C Family Services  
Chief Scientific Officer, Centervention

Durham, NC

[derosier@3cisd.com](mailto:derosier@3cisd.com)

My company, 3-C Institute for Social Development ([www.3cisd.com](http://www.3cisd.com)), has been around a long time, going on 23 years now. We have weathered many storms over the years, but we are now facing a foe that I fear will put us out of business. That foe is Internal Revenue Code **Section 174** which was revised under the Tax Cuts and Jobs Act (TCJA).

Section 174 imposes a tremendous tax burden on software companies like mine. The loss of current year R&D deductions and mandatory capitalization of those expenses makes tax payments so excessive that I am seriously considering closing the company or pivoting to exclude R&D from what we do.

**I feel punished for building a successful software development business, one that not only creates innovative software solutions, but also helps improve the health and wellbeing of children and families across the globe.** As you know, we began largely funded by federal SBIR/STTR grant funds (and matching support through ONE NC) and have successfully grown to be a primarily B2B funded company, providing unique and much needed software services to dozens of universities, non-profits, and research institutes. This is why the SBIR/STTR program provides seed funds, to help small businesses transition to independent business models.

I am reaching out to you to let you know what we are going through and to seek your help in how I can possibly urge Congress to help it's R&D companies sooner than later. With Q3 estimated tax payments just paid, and Q4 coming up in January, there is just so long 3C can hold out.

*National Institutes of Health and Department of Education SBIR/STTR portfolio company.*

## Bedrock Therapeutics, Inc., *Raleigh, NC*

**Matt Hirsch, PhD**

CEO

Bedrock Therapeutics, Inc.

I am the CEO of Bedrock Therapeutics, a small UNC-derived NC biotech company developing gene therapeutics for ocular diseases. Co-founded 5 years ago, Bedrock has relied on NIH and NC derived funding (including SBTDC) to de-risk our licensed technologies for human applications.

**Last month Bedrock was hit with a \$80,000 federal taxation due to section 174!** To cover this, and prevent bankruptcy, the Bedrock co-founders had to invest \$28,000 of our personal money. Certainly, our now "ex"-tax accountants should have notified us of section 174 a year or two ago to allow preparation for this tax law going into effect and **moving forward we are cautiously reluctant to accept NIH and NC state support as we do not have excessive amounts of cash on hand to cover the taxation under section 174.**

Luckily Bedrock Therapeutics survived this year, however, our business strategy has changed, and we will move at a more methodical pace which literally slows the translation of our novel gene therapeutics for human applications and Bedrock's overall growth.

*National Institutes of Health SBIR/STTR portfolio company.*

## Dignify Therapeutics, LLC *Raleigh, NC*

### **Ed Bugard, PhD**

President and Co-Founder  
Dignify Therapeutics

Dignify Therapeutics, LLC is a drug and medical device development company focused on treating incontinence in the elderly and neurologically impaired people. As one of the only small businesses in the world working specifically to improve bladder and bowel health for the elderly confined to assisted living facilities, it is imperative that our work continues, and we develop new treatments.

As an R&D company that will not realize any profit for many years, **the “Innovation Tax” resulting from Section 174 is devastating.** Our funding comes entirely from U.S. government grants (National Institutes of Health and Department of Defense), with an average funding of \$1.5 million/year. All funds are spent on research and development, and the fact that these funds are now considered “income” is unacceptable. Government grants do not include money to pay taxes on the funds provided by the government, and small government-supported businesses have no ability to pay these company income taxes.

In addition, Dignify Therapeutics is a limited liability company (LLC) taxed as a partnership. With this company structure, the “Innovation tax” is passed through to the individual LLC partners, forcing individuals to assume the tax liability of the company. Our **investors are responsible for a nearly \$700,000 tax bill for 2022** – and that includes backers that haven’t been involved with the company in years, leading to painful phone conversations. **Ask yourselves if you would personally accept paying the “income” tax levied on your employer. I doubt you would agree to that.**

*National Institutes of Health SBIR/STTR portfolio company.*

*\*\* This testimonial was also featured in The Business Journals:  
<https://www.bizjournals.com/bizjournals/news/2023/11/17/startup-taxes-section174-tax-code-research.html>*

## Dignify Therapeutics, LLC *Raleigh, NC*

**Karl Thor, PhD**

Chief Scientific Officer

Dignify Therapeutics

Dignify Therapeutics is a small biotech start-up (7 employees) that has no products yet (i.e. no revenue stream) but has extremely promising therapies in the pipeline for serious, unmet, medical needs of people with spinal injury, multiple sclerosis, Parkinson's disease, and the elderly, which are supported by NIH and DoD grants. After a small seed round of ~\$3 MM in venture capital, we are now totally dependent on NIH and DoD grants to continue our clinical development programs, while we attempt to raise our Series A venture capital in a dour economy.

Because NIH and DoD grants have not kept up with inflation across the last 2-3 years when the budgets were submitted, Dignify is required to spend more than we receive to continue the clinical development of therapeutic drugs and devices. Because of this, all of our senior management team has received substantially reduced or no salary for the past 2 years...but we continue to work full-time to bring new therapies. We do not work for free out of greed for future riches; we are just passionate about the importance of our work.

Section 174 of the Innovation Tax makes it nearly impossible for us to continue our drug discovery and development because it taxes us on money that we immediately spend on R&D expenses. As a personal example, I received no income from Dignify last year, but I am required to pay taxes on over \$111,000! If I had known this would be my situation today, I would not have submitted grants 2 and 3 years ago.

If Dignify is successful, and we start to generate revenue someday in the future, I would gladly pay taxes on the government grants that supported our success. But taxing me as an individual on money that I never personally receive defies Americans' sense of justice. **This administration made a mistake that will cripple US innovation by small businesses when they passed the highly flawed Section 174 of the Innovation Tax.** The Senate would be wise to pass The Tax Relief for American Families and Workers Act of 2024, and I would be very grateful.

*National Institutes of Health SBIR/STTR portfolio company.*

## Ideal Medical Technologies, Asheville, NC

### Leon DeJournett, MD

Chief Medical Officer  
Ideal Medical Technologies

[www.idealmedtech.com](http://www.idealmedtech.com)

Dear Senator Tillis, I am writing to strongly encourage your support in rescinding changes to Section 174 of the Tax Code, which took effect for tax year 2022, that force small business receiving U.S. Government grant support to capitalize "Research & Experimentation" expenses. This will result in an effective "Innovation Tax" on small pre-revenue U.S. based startup businesses that are at the forefront of innovation in our country. Many of these small businesses will not be able to afford this tax bill, and thus will be forced into bankruptcy, effectively ending their cutting-edge research efforts.

I am an ICU physician and have been developing an artificial pancreas system for use in the ICU setting, that has the potential to save 200,000 lives per year and decrease U.S. healthcare costs by up to \$12 billion annually. I have received a \$1.9 million SBIR grant from the NIH to support these efforts. In a recent first-in-human study of my ICU-based artificial pancreas system, which uses AI-based glucose control software, we easily outperformed all existing artificial pancreas systems. The FDA has designated our artificial pancreas system as a Breakthrough Medical Device, as the FDA has still not approved any artificial pancreas systems for use in the ICU setting.

Despite the aforementioned positive results, **if Section 174 of the Tax Code is not changed, I will be forced to pay a \$380,000 tax bill on the \$1.9 million grant funds, and will most likely have to end all efforts to bring this AI-based artificial pancreas system to market.** *Think about that!* The U.S. Government will receive a one-time \$380,000 tax payment, but in so doing will end development efforts on an AI-based artificial pancreas system that has the potential to save 200,000 lives per year and decrease healthcare expenditures by up to \$12 billion annually. Your support in modifying Section 174 of the Tax Code is greatly appreciated.

*National Institutes of Health SBIR/STTR portfolio company.*

## Karamedica, Inc., *Raleigh, NC*

### **Andrew Crofton, PhD**

Senior VP of Corporate Strategy  
Karamedica, Inc.

I am the Senior Vice President of Corporate Strategy at Karamedica, Inc., a small business based in Raleigh, NC with employees in California, New York, and Ohio. Our company is very proud to have received an SBIR/STTR grant entitled “Microparticle Therapy for Cerebral Amyloid Angiopathy,” totaling \$3.1 million through a highly competitive peer review process, that has enabled our company to develop applications that may be helpful in the future treating CAA as well as Alzheimer’s Disease. In recent months, we have had positive scientific results with potential medical implications for treating neurodegenerative disorders that we are sharing with the National Institute on Aging.

Unfortunately, an unintended outcome of the 2017 Tax Cuts and Jobs Act’s amendment to section 174 that goes into effect for 2022 is that Research and Experimental expenditures must now be capitalized over a period of 5 years for domestic research activities. What this means for Karamedica is that we will have to pay taxes on income that is directly tied to our R&E expenses. In particular, our SBIR/STTR/STTR income in 2022 was \$1.2 million. While these funds have been fully expended on important biomedical studies, section 174 requires us to pay taxes on 90% of the R&E expenses associated with our grant award, with a tax liability approaching \$230,000. **This amount is devastating for our business, and will likely, short of immediate Congressional action, result in a likely bankruptcy filing for our company, shutting down a promising therapeutic approach for a number of neurological diseases.**

Our tax filing is due on April 15 and it is very important that the IRS immediately issue guidance that excludes companies such as ours from being liable for taxes that we cannot afford to pay.

*National Institutes of Health SBIR/STTR portfolio company.*

<https://www.bizjournals.com/bizjournals/news/2023/11/17/startup-taxes-section174-tax-code-research.html>

## NALA Membranes, Inc., *Chapel Hill, NC*

### **Sue Mecham**

Co-Founder/CEO and President  
NALA Membranes, Inc.

This really is a problem for startups with grant funding. The tax code that went into effect in 2022 can end up requiring startups to pay corporate income tax on grant funds received from the government to do important research. Anyone who knows how these grants work knows that taxes are not a line item in the proposal budget and many startups rely on grant dollars as their main source of income.

**This was an oversight that needs to be fixed as it threatens the business model of many high technology startups.** Please sign the letter to request a fix to the tax code.

*National Institutes of Health SBIR/STTR portfolio company.*

## Olfax Medical, Asheville, NC

**Jonathan Beckwith, MS**

CEO

Olfax Medical

My company, Olfax Medical, was ecstatic to learn that we were awarded a \$5.6M grant from the Department of Defense. Hearing the news was a “complete game changer for Olfax” as it seamlessly followed up on an NIH Phase I SBIR award to complete all pre-clinical development for our novel migraine therapy. In addition to being a much-needed influx of capital, both the NIH and DoD programs (i.e. focus on rapid, non-addictive, pain management therapies) are 100% aligned with our product vision ... creating a match made in heaven scenario!

Our device and drug development activities are going according to plan. In addition to supporting ourselves, multiple contractors, and interns, we just set the wheels in motion to hire our first full-time employees. We’re even ahead of schedule and are beginning to plan for the next phase of clinical studies!

...we’ve just had a conversation with our CPA and heard devastating news. Per their interpretation of the newly enacted Section 174 code, they estimate we may owe more than \$400,000 in taxes in 2023 based solely on our grant funding (and even more in 2024 / 2025). This is even after application of all available R&D tax credits and small business deductions. As an LLC, these taxes will then flow directly to me and my partners creating an unfathomable personal tax obligation. An obligation that simply can’t be met considering we 1) have no other revenue, 2) cannot, per legislation, use grant funds to pay taxes, and 3) currently have no means of securing additional funds.

**If left as is, the result will not only be the loss of a grown company that is developing a product core to national wellbeing (i.e. developing an alternative to opioid use) ... personally, it will leave me and my partners at the brink of bankruptcy.** An outcome that I could never have imagined when we spoke of good news and great things to come earlier this year.

*National Institutes of Health SBIR/STTR program and Department of Defense portfolio company.*

## Smart Materials Solutions, Raleigh, NC

**Stephen Furst**

CEO

Smart Material Solutions

Smart Material Solutions makes products with renewable-energy and military uses. In 2022, the tax implications of Section 174 forced us to delay the purchase of capital equipment that we needed to seize the opportunity of upcoming SBIR funding. We used all of the company's available cash to pay much of our S-corp shareholders \$350,000 of tax liability. **This is on a company with \$1.1M of total revenue that would have otherwise recognized a \$90,000 loss**, as we're contractually obligated to spend all of the grant funding on R&D.

**In 2023, Section 174 will threaten our existence.** We no longer have the cash to weather a second year of this, and our bank, recognizing our duress and the fact that our 2022 income was "obviously not real," refused to loan us a single dollar despite 10 years of perfect credit.

Smart Material Solutions is largely funded by the Army and NASA. We develop scalable manufacturing of new "metamaterials" for national defense, space, and solar energy applications. We contribute to the US's manufacturing base for advanced materials in an industry that is largely dominated by China and other overseas powers.

For my part, as the majority shareholder in Smart Material Solutions, **my 2022 tax liability exceeded my take home salary from 2021 and 2022 combined.** As neither I nor the company has the cash to pay my liability, **I've already incurred more than \$20,000 of interest and penalties from the IRS.** These interest costs won't "unwind" as the R&E expenses are depreciated in future years.

*US Department of Defense, National Science Foundation, and NASA SBIR/STTR program portfolio company.*

*\*\* This testimonial was also featured in the Wall Street Journal:  
<https://www.wsj.com/politics/why-bipartisan-support-isnt-enough-to-change-this-tax-provision-a5ef8985>*

## Synoxa Sciences, Inc., *Raleigh, NC*

### **Joshua Pierce, PhD**

Founder and CEO

Synoxa Sciences, Inc

We're a small biotech startup that is running exclusively on NIH SBIR funding to cover our R&D expenses. We have no other funds to cover our \$40k tax bill that in previous years would have been only a couple thousand dollars. Synoxa is driving forward critical work in developing new treatments for antimicrobial resistance, but the changes in the tax code will ultimately cause operations to cease unless they are reversed.

University startups and other small businesses that are driving innovation in the US are being crushed by these changes, completely countering the goals of the SBIR and STTR programs.

*National Institutes of Health SBIR/STTR program portfolio company.*

## Tavros Therapeutics, Inc., *Durham, NC*

### **Nikki Heron**

Chief Financial Officer  
Tavros Therapeutics

Due to the tax burden created by the recent changes to Section 174 of the tax code, our ability to hire and innovate has been greatly diminished. This legislative change has placed considerable strain on our fiscal resources and has limited our ability to advance our science, which could ultimately delay bringing our cancer drugs to market.

The primary consequence of this legislation is an increase in our 2023 tax liabilities of more than \$2M. We are a pre-clinical R&D company with our only revenue coming from an R&D collaboration with a partner. We have historically had net operating losses but we will have a significant tax burden due to the combined impact of the accelerated recognition of our upfront payment from the collaboration agreement (\$1M) and the amortization of R&D expenses (\$2M). The substantial tax bill has led to budgetary constraints that are impacting various aspects of our operations. Unfortunately, one of the most significant repercussions is our diminished capacity to expand our workforce.

The increased tax burden has compelled us to reevaluate our hiring strategy. We are a start-up company with 18 employees and our 2023 tax liability is now larger than our current annual payroll. Instead of hiring additional scientists, research associates and computational experts to further oncology research, we must allocate those funds to taxes. The budget constraints resulting from the elevated tax burden are hindering our growth potential. Our ability to bring in fresh talent and expertise is now curtailed, affecting our competitiveness and adaptability in the market.

A smaller workforce directly correlates with reduced innovation capabilities. With fewer resources dedicated to oncology research, development, and creative endeavors, our capacity to innovate and develop the most impactful cancer drugs is comprised. Innovation is a cornerstone of our success. The current financial constraints are impeding our ability to invest in the talent and projects necessary to maintain our edge in a challenging oncology market.

*National Institutes of Health SBIR/STTR portfolio company*

## Theia Imaging, Durham, NC

**Hafeez Dhalla, PhD MBA**

Founder and CEO

Theia Imaging

*How bad is this for your firm?*

Fatal. Without significant relief, this tax change will force us to shut down and each of the three owners will receive massive personal tax bills. **While for larger companies, the effect of this change is only one of timing (i.e. the deductions will come in future years), we do not have the resources to pay the immediate tax liability this creates.** There are no future years for us. We will be forced to close, and we will not be in business long enough to make use of the future deductions. What's worse, the immediate tax liabilities hit us at the personal level. In our case, about \$150,000 in additional taxes amongst the three owners. In order to maximize the utility of our grant dollars, the three owners drew less than \$100,000 total in salary last year, but we will receive tax bills that are more than double our take home pay.

*What is your firm doing (differently than in prior years) to meet its new Tax obligations?*

Praying. There is nothing else we can do. We are developing a unique medical device that will help doctors diagnose and monitor treatment of retinopathy of prematurity: a disease that causes blindness in premature infants. But because pediatrics is a sector of the healthcare economy that has long been neglected and under-reimbursed, traditional funding raises are not a viable option, and our company can only exist by the grace of government grants. **The TCJA turned those grants into poison pills. If this law isn't repealed by April 15th, we will have no choice but to shut down.**

*What is the size of your firm (i.e., how many people's livelihoods are affected by this)?*

There are three owners who are employees, two additional full-time employees, and several contractors. We had plans (and funding) to more than double our headcount this year, but that funding is now poisoned and effectively unusable.

*National Institutes of Health SBIR/STTR portfolio company.*

## Translational Imaging Innovations, *Hickory, NC*

**Eric Buckland, PhD, MS**

Founder and CEO

Translational Imaging Innovations

I have sent communications to Tillis, Budd, and McHenry (Catawba County). Only Tillis responded.

**This year added \$1M to my taxable earnings. Turned a Phase II SBIR into taxable income without offsetting expense.**

As a software development firm, this is a disaster.

*National Institutes of Health SBIR/STTR portfolio company.*

## Wearable Defense LLC, Charlotte, NC

### Troy Dugo

CEO and Co-Founder  
Wearable Defense LLC

I recently received a \$256,000 SBIR Grant from the National Science Foundation to fund my new startup, Wearable Defense, LLC. I live in Rep Alma Adams' district plus my business is registered here too. I plan on hiring more than 30 people, preferably from our district, for all the new manufacturing positions that will be created.

The year that I received the grant, I was required to report the grant as income that year, but 100% went to R&D like it was supposed to, so I could offset that income with R&D expenses thus making it a wash for taxes. BUT...**If I had to amortize my R&D expenses over many years, I would never have been able to bring this innovation to life.** I would have had to pay thousands of taxes **out of my own pocket** that year. Grant money cannot be used for paying taxes.

This is why we **strongly advocate deferring the Internal Revenue Code 174's amortization requirement concerning R&D expenditures.** My entire new business is relying on R&D. If this is not deferred, Charlotte will lose its next unicorn. And lots of other startups will die.

Thank you for your help!!!

*National Science Foundation SBIR/STTR portfolio company.*

## QATCH Technologies LLC, *Chapel Hill, NC*

### **Zehra Parlak, PhD**

CEO and Co-Founder  
QATCH Technologies LLC

My company, QATCH Technologies, is working on a tool that can help pharma develop better drugs. Our innovation has been supported by NIH, NSF, and NIST SBIR grants, reviewed by leaders in the field. QATCH has 5 engineers working very hard to bring this product to market.

Because of the "Innovation Tax", our grant income is capitalized. QATCH is an LLC, and I am the majority owner, so a huge portion of this tax burden falls on me. It appears as if I made more than \$350k in 2022 and had to pay close to \$65k in taxes. In reality, I only made slightly more than \$65k, because I prioritized payroll for our employees over my salary. This payroll (biggest bucket in our grant budgets) is capitalized and I am penalized. **I had to use my family's emergency funds to pay this tax this year.** Maybe I should have let one employee go or reduced hours for everybody to give myself a \$65k raise and save for taxes. But it is just so wrong to even contemplate that when my team is working very hard. I could not do it.

If "Innovation Tax" becomes permanent, this will be fatal to a lot of small businesses and entrepreneurs, including us. We are already fighting a lot of things to build something good. If this situation is not fixed soon, many of us will go down without a fighting chance.

*National Institutes of Health SBIR/STTR, Department of Commerce, and National Science Foundation portfolio company.*

## FaceView Mask™ LLC, Medford, OR

**Jeanne Hahne, RN MSN**

Founder and CEO

FaceView Mask™ LLC

I want to express myself clearly about this law that has previously allowed us to deduct our research and experimental costs. It really hit me hard this year and made me want to give up.

The National Institute of Health/National Institute of Nursing Research gives us funding to push science forward and make the world a better place. They provide guidance as we do our research, start our companies and make scientific breakthroughs. I'm so grateful for their support and encouragement.

They bank on our passion and hard work to make fruitful future outcomes and (hopefully) increase economic development.

If we are financially penalized in the early stage development of our innovation, when there are so many highs and lows, it will be hard to continue.

**The government claims to prioritize innovation and then puts in place legislation that is devastating to dedicated entrepreneurs.** This goes for small businesses and for big companies too. The system was working, why change it?

I'm in the prototype stage of the first clear N95 mask that could help many people and make communication, compassion and connection easier. Please help support people like us who care about making a difference in the world.

*National Institutes of Health SBIR/STTR portfolio company.*

## Discovery Machine, Inc., *Williamsport, PA*

### **Molly Lusk**

Director of Operations  
Discovery Machine, Inc.

Our woman owned small business primarily serves the US Department of Defense through the Small Business Innovation Research program. Ironically the program's mission is "to support scientific excellence and technological innovation through the investment of Federal research funds in critical American priorities to build a strong national economy." Internal Revenue Code Section 174 amortization requirements effectively negate that mission. Our company, which focuses on developing Artificial Intelligence agents for use across an array of military training programs, has been forced into financial hardship from these tax code changes.

As a bootstrapped, research and development company, our primary expenses are our team's salaries, health insurance, and employer payroll taxes, 90% of which must now be amortized over five years. Inflated income, that was actually cash **spent** to cover operating costs, was passed on to our S Corporation shareholders, which inflated each shareholder's liability, moving many into higher tax brackets. Therefore, when the time came to pay the 2022 tax bill, which ballooned over **8500%**, hard choices had to be made. Positions and holiday bonuses had to be eliminated. Combined with the continuing resolution, we had to cut expenses to the bone. Our team has been reduced by 34%. The impact to the economy is the reduction of highly skilled, well-paid jobs, just to pay the federal income tax bill. Fortunately, conservative budgeting allowed us to pay the taxes last year, but those savings are typically used to cushion funding delays resulting from congressional Continuing Resolutions. Our cushion continues to be reduced, preventing us from practicing sound conservative cash flow measures. We will continue to be punished if the company grows beyond what we have amortized. Investing in our company is limited if not stopped while the government keeps our money for years. In addition, the defense supply chain is being threatened and small business innovation will be hindered giving China an advantage. **There is no viable path forward with Internal Revenue Code Section 174 amortization as it currently exists.**

*National Institutes of Health SBIR/STTR portfolio company.*

## FibroTherapeutics, Inc., *Charleston, SC*

### **Stanley Hoffman, PhD**

Medical University of South Carolina

Co-Founder and CEO

FibroTherapeutics, Inc.

Up until now, companies that received STTR and SBIR grants would have a very little, if any, income tax liability because they would have no profit because the money they received from the government would exactly match their expenses. This is good for innovation because all the funds received can go to R&D expenses.

While there may have been a problem that Congress was addressing, the Tax Act of 2017 has inadvertently threatened the existence of the STTR/SBIR program by stating that R&D expenses must be amortized over a 5-year period starting 2022. This means that in the current year most of the money received as a cost reimbursement by a company with an STTR or SBIR grant would be taxable. These companies do not have this money in reserve and they do not have the money in the budgets they submitted when requesting government funding.

In my own personal case, in fiscal 2022 my company, FibroTherapeutics, Inc., received \$229,000 in cost reimbursements. Without a change in the law, most of this money would be taxable at a 21% rate. The company cannot pay this money and would have to go bankrupt and thus would never be able to amortize the rest of its expenses. This is not what Congress had in mind when it authorized and re-authorized the STTR/SBIR program! This, no doubt, is also not what Congress had in mind when it passed the Tax Act of 2017.

Therefore, I am pleading with you to change the law so that companies receiving STTR and SBIR grants can deduct all of their R&D expenses in the fiscal year in which they were generated.

*National Institutes of Health SBIR/STTR portfolio company.*

## Gruthan Bioscience, *Charleston, SC*

### **Stephen Alexander Duncan, PhD**

Endowed Chair, SmartState Endowed Chair in Regenerative Medicine

Medical University of South Carolina

Founder, Gruthan Bioscience

I was a big fan of the SBIR/STTR/STTR programs throughout the NIH and held an STTR from NHLBI. However, the amendments made to the Tax Cuts & Jobs Act of 2017 last year changed the longstanding deduction for R&D expenditures to a mandatory five-year amortization for domestic R&D. This includes 'income' from STTR/SBIR/STTRs made to both the company and the partner institution. Since most spinoff companies rely solely on federal grants and are LLC's, the tax owed on these federal contracts is levied upon us as individuals.

I personally paid \$30K in taxes because of the STTR funding we had received from NHLBI. We can only be grateful that we were not in a phase 2 of funding, which we were about to apply for. In addition the changes to the Jobs Act caused a rupture in my partnership with my CEO who as a partner was also subjected to these taxes and so the company lost its CEO. Finally, since any expenditures on the STTR were now taxed it left no mechanism for us to move forward and the ruling effectively bankrupted our company Gruthan Bioscience, which we have now had closed.

*National Institutes of Health SBIR/STTR portfolio company.*

## TreesROI, Hinesburg, VT

**Marie V. Ambusk**  
Founder and CEO  
TreesROI

I am reaching out with a pressing concern about the “Research and Experimentation” (R&E) tax policy change that will stifle American innovation and compromise our nation’s leadership in science, technology, and innovation.

This problem affects my tech startup **TreesROI™** and the product development of **INSIGHT™**, as we are in the final stages of the National Science Foundation’s (NSF) Small Business Innovation Research (SBIR) pre-award negotiations. The award is critical to our R&D efforts ... but, this tax problem creates a hardship that could end our dreams! (it is unfair and illogical!)

Previously, the full grant amount would have been offset by all expenses incurred during the same year. If we are favored with an award, we will receive \$275,000 of income in 2024 but only 10% of the expenses are allowed in year 1. Therefore, the taxable income for TreesROI (me) will be \$247,500 ( $\$275 \times 90\%$ ) in 2024 ... the expenses will be fully amortized over 60 months. (I know ... it’s outrageous!)

With INSIGHT™ we can help fix tree roots to prevent them from strangling the young trees to death ... but we can not fix the stranglehold of Section 174 on innovation without your help.

*National Science Foundation SBIR/STTR portfolio company.*

## Pangea Chat, *Richmond, VA*

### **Will Jordan-Cooley**

CEO and Founder  
Pangea Chat

At the beginning of 2022, we were seed-funded by a \$256k NSF SBIR for the R&D of a web and mobile app advancing the application of artificial intelligence to education. We received supporting R&D grants from state and local organizations which allowed us to hire our first 2 full-time employees and develop a prototype that is now live on the web and in the mobile stores.

As with most early startups, money is tight. The grant-funded term (and our current startup runway) extends through October 2023. We have some investment interest from VC firms and several angel groups. We are planning to open a seed round in Q2 2024 - after securing our first paying customers for the spring semester. We are in review for a Phase II NSF SBIR. As with any startup, it is always possible that there will be some gaps in funding, and in these cases, the core team will work for equity as compensation.

However, Section 174 was a sudden blindside that severely impacts our company. **The Notice increases our tax burden by approximately \$60k for the grant-funded term, which is equivalent to the annual salary of our highest-paid employee and ~3 months runway.** Of course, that assumes our funding agencies would allow us to add these taxes to the budget, which they don't allow. One high-risk option might be to take on debt to pay these taxes, but we have limited corporate assets to borrow against. We might try to pay this with upcoming investment, but this would pass that risk to investors and be a hard sell in due diligence.

As my company is a pass-through LLC, I am personally responsible for this ~\$60k, despite budgeting myself a salary of \$13k per year in order to put the maximum amount of grant funds possible into the funded R&D project. If we are unable to secure additional funding, **I may well be forced to close the business and even declare personal bankruptcy.**

As a first-time grant recipient, I leaned heavily on information provided by NSF and Virginia's SBDC, and I found out about Section 174 via an email from NSF on March 24, shortly after submitting our taxes. I also acknowledge that it is ultimately my responsibility as a business owner to understand applicable tax law. However, even with perfect information flow and plenty of time to plan, this bill seems to severely negate the aims of the SBIR program to de-risk the commercialization risk of research, and I hope that the IRS will withdraw Notice 2023-63 as it strays from Congressional intent of Section 174's 1954 Congress and the 2017 TCJA Congress.

Notice 2023-63 will severely inhibit innovation in the United States by forcing "research for hire" companies to be taxed out of existence. This poses an existential crisis for our start-up community.

*National Institutes of Health SBIR/STTR portfolio company.*

## Virtici LLC, Seattle, WA

**Neil Fanger, PhD**

CEO

Virtici

The impact of Section 174 on our innovation economy is a matter of grave concern. If left unaddressed, it could lead to the bankruptcy of many of our Nation's most promising R&D firms, which would be a significant setback for our economy. As China's investments in R&D are accelerating, we cannot afford to fall behind.

The lack of clarity surrounding the interpretation of the new tax law is a major issue. Despite copious expert input, we still have little confidence in how to interpret these changes. The "Big 4" accounting firms made a guess as to how to interpret the new tax law, but nobody is clear, and for many of us, it has the potential to lead to bankruptcy. This has been a known problem with TCJA since 2017, and all the experts said Congress would fix it. The inability to fix it during the last 5 years has led to weeks of wasted time and large accounting bills, even if they now fix it retrospectively. I estimate that it will cost \$40k in FTE and accounting just to respond to the uncertainty. If that's typical across the NIH and DOD SBIR portfolios, we need to start adding zeros.

We have been in business for 12 years, and while we could survive, it would wipe out our reserves. Further, as part of our business, we help other biotechs and med device startups in our region. **Based on my first-hand experience and NIH and DOD data, a large majority of these seed-stage companies - the future of our Nation's innovation economy - will not survive. Reasonable estimates indicate that at least 5,000 grant-funded (i.e., very high merit) companies will go under.**

Senators Hassan and Young have a solution, and we need Congress to act. The damage caused by inaction is already considerable. It's better late than never, and we must fix this mess now – before Nov. 17th - before it's too late.

*National Institutes of Health SBIR/STTR portfolio company.*

## Neurosetta, *Madison, WI*

### **Randolph Ashton, PhD**

Co-Founder and CEO  
Neurosetta

In January 2022, Neurosetta LLC received a \$1.7M FastTrack STTR grant from the NIH/NIEHS to commercialize technology that can enable human developmental neurotoxicity testing and novel precision medicine approaches for currently intractable neurodevelopmental disorders, e.g. Autism Spectrum Disorder.

Neurosetta, which is funded 100% by STTR R42ES033912 with no other profit yet, now has a tax burden of ~\$75K instead of ~\$0, as would have been the case in prior years. As an LLC, the tax burden flows directly through to the co-founders, who have largely been volunteering their time working hard to translate technology that advances NIH/NIEHS (and humanity's) mission. **This "innovation tax" is an untenable situation for Neurosetta and the co-founders, and could cause Neurosetta's demise wasting millions of dollars of investment by the EPA, NINDS, and NIEHS** to develop and bring RosetteArray technology into the commercial regulatory and biotech sector. Neurosetta will not survive this upcoming tax season, and this will terminate or delay efforts to bring our life altering technology to market.
